Mobility 2022

15–16 June 2022

Hilton Hotel, Sydney

Abstract Submission Guidelines

- Your abstract should be max 250 words and written as a paragraph, max 2 abstracts per person.
- It should tell us how your system, product, service or point of view strongly contributes to the broader Mobility conversation, how it creates efficiencies, and builds on the overall national competitive ecosystem. You should not use this submission as a means of selling your organisation's products or services (the submission should not be a sales pitch).
- All submissions will be reviewed by a panel made up of subject matter experts representing industry, academia and government. Notifications will be emailed to submitters in April 2022.
- If successful, your abstract will be scheduled into the program and you will be informed of your presentation schedule. You will then be asked to complete your Speaker Registration by the end of April 2022. (All speakers are required to register, regardless whether presenting in-person or remotely.)
- A reduced registration fee is available for speakers.
- ITS Australia will deliver the event inline with government restrictions. Should the event pivot to hybrid or fully digital, there will be no refund and ITS Australia will have a conversation with you about the best way for you to give your talk.
- **Submission Close: 28 February 2022**

200 attendees

There is no better time to re-imagine our mobility, how we work and live.

The global mobility industry's transformation has far-reaching implications for how transport users move within neighbourhoods, through cities, and across countries. The effect of this transition touches every part of the transport technology industry: carmakers, energy companies, insurers, health care, government and many more.

As a new ecosystem of mobility emerges, Mobility 2022 is the must-attend event to understand how our nation's new mobility industry is evolving and maturing.

-
- 2 Day Conference Sessions
 - Welcome Reception Networking Function
 - Daily catering and refreshments
 - On demand access to speaker slides and any presentation recordings for 3 months post-event
 - Lead Generation Attendee List for sponsors

Designed by industry for industry

The Mobility 2022 program is designed by a committee of transport technology leaders representing government, academia and industry. The committee works collectively over several months to develop a substantive program addressing real-world challenges and opportunities.

Like all of ITS Australia's events, Mobility 2022 is designed by industry, for industry. The conference will bring together the best national and international expertise to shape future transport in Australia.
